AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

- 1. (currently amended): A spiral separation membrane element comprising a perforated core tube and, wound therearound, one or more separation membranes, one or more feed-side passage materials, and one or more permeation-side passage materials, wherein the permeation-side passage materials each have warps extending almost parallel with the direction of flow of a permeated liquid and wefts fixed to the warps, a ratio of the pitch (width of each warp + distance between the opposed sides of adjacent warps) to a distance between the opposed sides of adjacent warps is 1.1/1 to 3/1, and a ratio of a thickness of the passage material to a distance between the opposed sides of adjacent warps is 0.25/1 to 1.25/1 and wherein the permeation-side passage materials are between the separation membranes.
- (original): The spiral separation membrane element as claimed in claim 1, wherein the ratio of the height of each warp to the thickness of the passage material is 10/11 to 30/31.
- (original): The spiral separation membrane element as claimed in claim 1, wherein
 the ratio of the pitch (width of each warp + distance between the opposed sides of adjacent
 warps) to a distance between the opposed sides of adjacent warps is 1.5/1 to 2.5/1.

- (original): The spiral separation membrane element as claimed in claim 1, wherein
 the ratio of a thickness of the passage material to a distance between the opposed sides of
 adiacent warps is 0.3/1 to 1.0/1.
- (original): The spiral separation membrane element as daimed in daim 1, wherein the warp has a diameter of 350-600 µm, and the weft has a diameter of 20-50 µm.
- (original): The spiral separation membrane element as claimed in claim 1, wherein a distance between the opposed sides of adjacent warps is 0.3-1.5 mm.
- (original): The spiral separation membrane element as claimed in claim 1, wherein a
 distance between the opposed sides of adjacent wefts is 200-1,000 µm.
- 8. (new): The spiral separation membrane element as dalmed in claim 1, wherein the warp has a diameter of 350-600 μ m.
- (new): The spiral separation membrane element as claimed in claim 1, wherein the weft has a diameter of 20-50 µm.
- (new): The spiral separation membrane element as claimed in claim 1, wherein the separation membranes and permeation-side passage materials are between the feed-side passage materials.
